IN THE CLAIMS:

- 1. (Currently Amended) An isolated koji mold having increased protease activity and peptidase activity in relation to a parent strain resulting from transformation with a protease nucleic acid sequence and a peptidase nucleic acid sequence, wherein the isolated koji mold has at least 3 times greater protease activity and at least 5 times greater peptidase activity than the parent strain.
- 2. (Previously Presented) The isolated koji mold according to claim 1, wherein the protease nucleic acid sequence and the peptidase nucleic acid sequence are of koji mold origin.
- 3. (Previously Presented) The isolated koji mold according to claim 1, wherein said isolated koji mold is a member of Aspergillus sojae, Aspergillus oryzae, or Aspergillus tamarii.
- 4. (Previously Presented) The isolated koji mold according to claim 3, wherein the protease nucleic acid sequence and the peptidase nucleic acid sequence are of koji mold origin.
- 5. (Previously Presented) A method of breeding the isolated koji mold according to any one of claims 1 to 4 comprising the steps of:
- (a) transforming a parent strain of koji mold with a protease nucleic acid sequence and a peptidase nucleic acid sequence; and,
- (b) selecting a transformant having increased protease activity and peptidase activity relative to said parent strain.

PATENT Customer No. 22,852 Attorney Docket No. **4853.0060**

- 6. (Previously Presented) A method of manufacturing a flavor enhancer which comprises allowing a culture product of the isolated koji mold according to any one of claims 1 to 4 to act on a protein.
- 7. (Previously Presented) A flavor enhancer obtainable by allowing a culture product of the isolated koji mold according to any one of claims 1 to 4 to act on a protein.
- 8. (Currently Amended) The isolated koji mold of claim 1, An isolated koji mold having increased protease activity and peptidase activity in relation to a parent strain resulting from transformation with a protease nucleic acid sequence and a peptidase nucleic acid sequence, wherein the protease nucleic acid sequence encodes the same amino acid sequence as that encoded by the nucleotide sequence of SEQ ID NO:2, and the peptidase nucleic acid sequence encodes the same amino acid sequence as that encoded by the nucleotide sequence of SEQ ID NO:1.
 - 9. (Cancel).
 - 10 12. (Not entered)
